

# MOHAN LAL

Senior / Lead Frontend Engineer — Frontend Architecture, Design Systems & AI-Augmented Engineering  
+91 9711070629 | rajoria7@gmail.com | linkedin.com/in/mohanrajoria | github.com/mohanrajoria | Gurugram, India

## PROFESSIONAL SUMMARY

Frontend engineer with 11+ years building and scaling web platforms across AI, Healthcare, Fintech, Publishing and Consumer domains. Specialised in frontend architecture, design systems, performance engineering and developer productivity, with a track record of leading platform migrations end-to-end and mentoring engineers. Early adopter of AI-augmented engineering workflows (Cursor, Claude, GitHub Copilot) for architecture planning, large-scale refactoring, debugging and code modernization. Consistently ships work that cuts load times, raises delivery velocity and removes hours of recurring engineering and operations effort every week.

## TECHNICAL SKILLS

**Frontend:** React, Redux, TypeScript, JavaScript (ES6+), Next.js, RxJS, React Hook Form, HTML5, CSS3  
**Architecture & Design Systems:** Frontend Architecture, Design Systems, MUI, Storybook, Tailwind CSS, Emotion, SCSS, Micro-frontends  
**AI-Augmented Engineering:** Cursor, Claude, GitHub Copilot — code generation, large-scale refactoring, migration planning, debugging, technical investigation, documentation  
**Tooling & Productivity:** GitHub Actions, CI/CD, Webpack, Jest, Git | **Analytics & Monitoring:** Mixpanel, Statsig, Sentry, Core Web Vitals  
**Backend & Other:** Node.js, Express.js, Python, WebRTC, Google Maps, Chrome Extensions, SEO

## PROFESSIONAL EXPERIENCE (11+ YEARS)

**Senior Software Engineer** Aug 2024 – May 2026

**ZeniAI — AI-powered bookkeeping & finance platform**

- Championed AI-augmented engineering workflows using Cursor and GitHub Copilot across architecture planning, feature development, large-scale refactoring, testing, documentation and workflow automation, measurably shortening delivery cycles for the team.
- Re-architected the design system around centralized responsive typography and led the MUI v6 → v7 migration across 4 repositories with a coordinated design refresh, eliminating UI inconsistencies application-wide.
- Architected a tab-scoped Redux state management layer for bookkeeping workflows, delivering 3× **faster** transaction categorization.
- Delivered the Dashboard V3 migration enabling efficient rendering of **1k+ rows** with **40%** higher visible transaction density; cut Cockpit dashboard load time by **~30%** through data-fetching optimization.
- Built Expense Transfer and transaction-split provisioning workflows, removing **~5 hours/week** of manual FinOps and bookkeeping effort.
- Automated version-approval workflows across 6 repositories (~30 min saved per publish, per developer) and Dependabot ownership and alert routing (**~2 hours/week** saved), alongside internal tooling and GitHub Actions to raise developer productivity.

**Lead Software Engineer** Dec 2018 – Jun 2024

**HealthTap — Virtual primary care & telehealth platform**

- Led frontend initiatives for patient-facing and provider-facing React applications, owning technical direction, code reviews and mentorship while partnering with product, design and backend teams.
- Built a reusable React email platform that reduced template development effort by **~70%** across marketing and transactional communications.
- Migrated SEO-critical experiences from React Static to Next.js and improved Core Web Vitals, page performance and search indexing.
- Implemented Apple and Google authentication, increasing signups by **~22%**; integrated an experimentation framework that reduced operational overhead by **~50%**.
- Developed WebRTC consultation experiences and realtime notification systems, and delivered an insurance claim portal serving healthcare users at scale.

**Senior Software Engineer** Apr 2016 – Nov 2018

**Juggernaut Books — Digital publishing & e-reading platform**

- Built real-time publishing workflows and custom authoring experiences enabling writers to self-publish digital content, plus content ingestion and editorial tooling used across Web, Android and iOS.
- Contributed to the AngularJS → React migration, improving application performance by **~50%**, and implemented SEO and metadata optimization to lift discoverability.
- Integrated Paytm payment workflows and Facebook/Google social sign-in; contributed to the RailYatri reading experience serving **millions** of travelers.

**Earlier Experience** 2013 – 2016

- Voodoo.in — Software Engineer:** Built a Chrome extension delivering real-time product recommendations and deal discovery to a large consumer base, and Node.js automation services monitoring and notifying updates across 30+ Android applications.
- Townrush — Software Engineer:** Built real-time logistics tracking for live monitoring of field executives, and operational dashboards for workforce visibility, activity tracking and route management serving **3,000+ users**.
- PropTiger — Intern:** Developed interactive apartment selectors and 3D floor-plan exploration experiences; built Selenium and Node.js marketing automation that cut manual posting effort by **~75%** across 25+ websites.

## EDUCATION

**B.Tech, Information Technology** — Indian Institute of Information Technology (IIIT), Allahabad | CGPA: 7.12 2015
